

What Allergists don't want you to know!

If you are suffering from allergies, it may be more than just outdoor pollutants. Your vacuum could be your worst enemy. Bring by your vacuum and we will give it a FREE scan to determine its effectiveness in cleaning your air.

This unit is Swiss made by IQAir®. It can detect airborne particle sizes from 0.3 microns to 5 microns, allowing users to focus only on particle sizes of interest. This is a very wide range, allowing the instrument to be useful in a **cleanroom** as well as general environmental testing.

### **Features of the IQAir ParticleScan Pro...**

- Tracks down the sources of **particulate** pollution
- Helps you evaluate the effectiveness of pollution control measures
- Offers a cumulative or differential particle count
- Logs air pollution levels for recordkeeping
- Inspect HVAC equipment and ducting
- Let's you analyze logged data to determine actions
- Meets NIST standards
- Effective for mold testing
- 6 second sampling time
